

TABALI TALUD

CABERNET SAUVIGNON

2020

VALLE DE MAIPO
ALTITUDE: 320 METERS
SOIL: COLLUVIAL
SOUTH FACING SLOPE
LOCATION: COASTAL MOUNTAIN RANGE

VINEYARD

The DOM vineyard is located in the Maipo Valley on a slope that forms part of the Coastal Mountain range.

CLIMATE

The Mediterranean climate in this area is fresher than that further into the valley, mainly because the slope is south-facing. This means that the fruit is less exposed to the sun during the ripening period. Furthermore, the vineyard is situated close to the River Maipo, which in this area is cooled by a fresh sea breeze, helping to lower temperatures. These two factors together mean that the grapes ripen slowly, resulting in an elegant Cabernet Sauvignon wine with very fresh black fruit.

SOIL

This vineyard is planted on a slope of colluvial origin. During the time that the soil was formed, the large rocks located in the highest parts of the Coastal Mountain range became weathered and fractured. Fragments fell and came to rest at the base of the Spanish word "Talud", meaning slope). This type of soil is littered with lots of angular stones, making it very low in fertility. It has an excellent proportion of clay and sand, favouring drainage and promoting exploration by the roots of the plant. These are key characteristics for achieving naturally low production levels and grapes that are very concentrated and of high quality.

PRODUCTION AND AGEING

Every single task in the vineyard, from pruning to harvesting, is completely supervised by Tabali's viticultural and winemaking team in order to produce the best quality fruit possible. The grapes are hand-harvested into 20kg-bins to ensure that they arrive in optimal conditions. The grapes in each area are harvested as they reach the optimum level of phenolic ripeness. Harvesting therefore began on 21 March. The clusters of grapes are manually selected. Then, after destemming, the individual grapes are selected again to ensure that only the best enter the fermentation process. The fermentation takes place in small stainless steel tanks (5 and 10 tons), so we can vinify small quantities separately. The temperature is controlled throughout the vinification process, particularly during the initial cold soak and the alcoholic fermentation. This wine was aged for 18 months in French oak barrels before being bottled.

TASTING NOTES

This wine has a very elegant and fresh nose with lots of black fruit that give it character and singularity. The French oak makes a subtle contribution, lending the wine great complexity. In the mouth it is very concentrated with excellent, smooth, silky and firm tannins. This is a well-balanced, fresh wine, packed with fruit, in which the notes of blackcurrants, black cherries and spices are especially notable. Long and very persistent finish.

TECHNICAL INFORMATION

Winemaker: Felipe Müller
Varieties: 100% Cabernet Sauvignon
Yield: 8.000 kgs per ha
Harvest: March 21st
Alcohol: 13,5%
PH: 2.49
Total Acidity: 5.94 g/l
Residual Sugar: 3.19 g/l
